Application/Control Number: 10/518,069

Art Unit: 3634

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

The applicant's information disclosure statement dated 12/14/2004 has been considered and a copy has been placed in the file. Furthermore, the Examiner could not locate the foreign references and the applicant failed to provide copies and therefore a line has been drawn therethrough.

In the abstract, in line 1, it appears that "Comprising" should be -comprising--.

Claims 11-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 11, line 9, the applicant recites "said profiles" but it is not readily apparent to the Examiner which profiles the applicant is referring to, "closure profiles" in line 4 or "vertical profiles" in line 8.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

As best understood, claims 11-21 are further rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. patent to Miller et al. (4,060,935) in view of German

Application/Control Number: 10/518,069

Art Unit: 3634

patent publication no. DE 101 46 604 A1 to Emde. Miller et al. ('935) disclose a revolving door comprising a plurality of two pane glass panels. Miller et al. ('935) fails to disclose a light positioned within the two panes. German patent publication no. DE 101 46 604 A1 to Emde discloses a two pane window having a plurality LED lighting elements/sources situated within a sealing portion. It would have been obvious to one of ordinary skill in the art at the time of the invention to provide the panel of Miller et al. ('935) with a light source as taught by German patent publication no. DE 101 46 604 A1 to Emde since the light source is hidden from view and still provides lighting within a walkway as a closure is moved from a path of the walkway.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Japanese patent No. 5-295962 discloses a light source within a swinging pane similar to that of the applicant's invention. U.S. patent application publication to Emde is an English translation to the above German application. U.S. patent to Mizumo et al. discloses a light source similar to that of the applicant's invention. U.S. patent to Saito et al. disclose a light source similar to that of the applicant's invention.

Any inquiry concerning this communication should be directed to Jerry Redman at telephone number 571-272-6835.
